The Project

SANDAG is collaborating with the North County Transit District (NCTD) and the City of Encinitas to improve the Chesterfield Drive railroad crossing. This project will improve safety and access at Chesterfield Drive for people walking, riding bikes, and driving by constructing sidewalk curb extensions, a multi-use Class I bikeway and pedestrian path, rail crossing signals and gates, and improved signage. To be built concurrently with the San Elijo Lagoon Double Track Project, coordinating the construction schedules for both projects will result in cost, schedule, and operational efficiencies.

The project includes modernizing and enhancing the crossing warning system with the installation of new pedestrian and vehicle warning lights and gates, which will increase awareness when a train is approaching the intersection. The project also will widen the existing medians to prevent motorists from driving around lowered automatic gate arms.

The existing sidewalk on the south side of Chesterfield Drive will be removed and all pedestrians will cross the rail tracks via an improved Americans with Disabilities Act (ADA) accessible sidewalk on the north side. A reconfiguration of the right-hand turn from westbound Chesterfield Drive onto northbound Coast Highway 101 will help vehicular traffic avoid people walking and biking at the crossing.

This improvement also will provide a direct connection to the Coastal Rail Trail segment from Chesterfield Drive to E Street in Encinitas. The Coastal Rail Trail is a planned, continuous bike route that runs approximately 44

miles from Oceanside to Santa Fe Depot in Downtown San Diego. Initially planned in the mid-1990s, it is being constructed in segments by SANDAG and the various cities it traverses.

Other improvements include installing electronic directional signs at key locations at the intersections of Coast Highway 101, Chesterfield Drive, and San Elijo Avenue. When a train approaches the intersection these signs will notify drivers when it is safe to turn.

The Need

Chesterfield Drive is the only legal rail crossing for more than a mile in both directions. The existing configuration of the intersection creates barriers to people walking and biking with isolated pedestrian islands, narrow sidewalks, steep inclines, and minimal lighting. Improvements to the Chesterfield Drive crossing will improve pedestrian and bicycle accessibility.

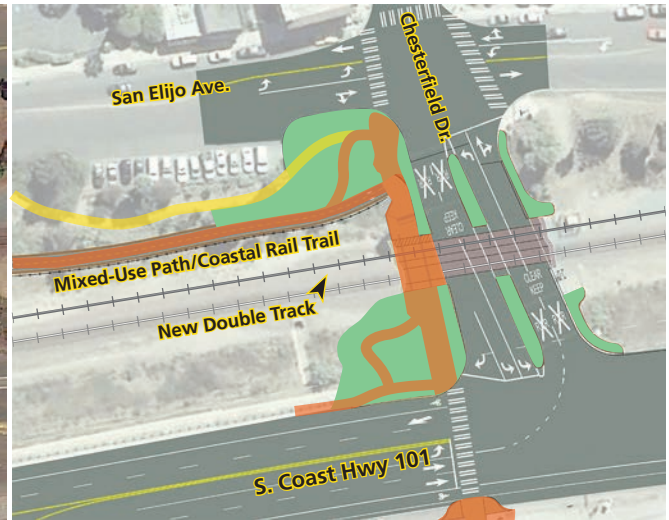

The Chesterfield Drive Rail Crossing Improvement Project is one component of the San Elijo Lagoon Double Track Project, which is fully funded for construction. The project will add 1.5 miles of new double track from Cardiff-by-the-Sea to the southern border of the San Elijo Lagoon and replace the wooden trestle San Elijo Lagoon rail bridge with a modern, concrete bridge. The second track through Encinitas will give operators more than four miles of continuous double track. SANDAG is coordinating the construction of the new rail bridge with planned restoration of the San Elijo Lagoon and bridge improvements on Interstate 5 (I-5).

(Continued on reverse)

Existing

Planned

■ = paved path (new)
 ■ = unpaved path (existing)
 ■ = landscaped areas

The project includes sidewalk curb extensions, a multi-use Class I bikeway and pedestrian path, rail crossing signals and gates, and improved signage. Crosswalks with high visibility and shorter crossing

Corridor Strategy

Over the next 15 years, SANDAG has approximately \$1 billion in planned improvements for the San Diego segment of the Los Angeles-San Diego-San Luis Obispo (LOSSAN) coastal rail corridor, including a primary effort to double track the corridor from Orange County to Downtown San Diego. To date, approximately two-thirds

of the county's LOSSAN coastal rail corridor is double tracked, with more than 20 rail improvement projects in design or under construction. By 2030, more than 97 percent of the corridor is expected to be double tracked. Double tracking allows trains traveling in opposite directions to pass without slowing down or

stopping. Other infrastructure improvements include bridge and track replacements, new platforms, pedestrian crossings, and other modernization and operational enhancements. The rail enhancements are part of a strategy to improve all modes of transportation within the congested I-5 North Coast Corridor (NCC). The NCC

Program is a balanced set of transportation, environmental, and coastal access projects to improve the quality of life for residents, create a stronger local and regional economy for the future, and enhance the coastal environment.

Project Status

The Chesterfield Drive Rail Crossing Improvement Project's design is expected to be completed in 2016. Construction will be closely coordinated with the double-tracking project which is scheduled to begin in 2016 and will take approximately two years to complete.

Project Budget

The cost for the Chesterfield Drive Rail Crossing Improvement Project is \$4.5 million. The Caltrans Division of Rail and Mass Transportation and SANDAG have received a \$2.2 million grant from the Federal Railroad Administration (FRA) for the project. The remaining funds will come from *TransNet*, the regional, voter-approved half-cent sales tax for transportation projects administered by SANDAG.
