**Subject: FINAL PHASE I ENVIRONMENTAL SITE ASSESSMENT
BAYSHORE BIKEWAY SEGMENT 8B
SANDAG
AGE Project No. 71C2**

Dear Mr. Bradbury;

In accordance with your request, we have performed a Phase I Environmental Site Assessment for the above-mentioned subject project. We are pleased to submit the accompanying report to present a summary of our findings, opinions and conclusions. This Final Report incorporates our response to the review comments that we have received from SANDAG on our Draft Report dated August 13, 2014 and the revised project limits.

Should you have any questions regarding the contents of the report or if we may be of further assistance, please feel free to contact our office.

Sincerely,

ALLIED GEOTECHNICAL ENGINEERS, INC.

Nicholas Barnes, P.G., C.E.G.
Senior Geologist

Sani Sutanto, P.E.
Project Manager

1.0 INTRODUCTION**1.1 Project Background**

In accordance with the request of Quality Infrastructure Corporation (QIC), Allied Geotechnical Engineers, Inc. (AGE) has performed a Phase I Environmental Site Assessment (ESA) study for the Bayshore Bikeway Segment 8B for the San Diego Association of Governments (SANDAG). The investigation was performed in conformance with AGE's proposal dated February 6, 2014, and the subconsultant agreement entered into by and between QIC and AGE on June 5, 2014.

The project alignment is approximately 1,600 feet long and extends along Bay Boulevard between Palomar Street and Pacific Avenue as shown on the Location Map (Figure 1). Elevations along the bikeway alignment vary from approximately 7 feet to +12 feet above mean sea level (msl) (GoogleEarth, 2014). The purpose of this study is to evaluate potential impacts from the presence of hazardous materials/wastes and contamination at or along the immediate vicinity of the project alignment.

1.2 Objective and Scope of Services

The objective of this Phase I ESA study is to review past and present land use practices and site operations to evaluate the potential presence of recognized environmental conditions to within a one mile distance from the project alignment. The scope of this ESA study included a reconnaissance visit of the project site and adjacent properties, and a review of pertinent records/files maintained by various local regulatory agencies, and telephone interviews with Mr. Warren Dodd of South Bay

Salt Works; Mr. Tim Ripley, the Public Works Manager for the City of Chula Vista; and Mr. Bryan Genovese, Senior Engineer for the City of San Diego's Transportation and Storm Water Department.

The scope of this study did not include a subsurface investigation to collect soil and groundwater samples for analytical laboratory testing nor did it include a survey to evaluate the possible presence of radon and/or methane gases on the project site. Furthermore, our study also did not include an assessment of potential hazards associated with the presence of asbestos, lead-based paint, lead in drinking water, wetlands, regulatory compliance, cultural and historic resources, industrial hygiene, health and safety, ecological resources, endangered species, indoor quality or electromagnetic fields.

The guidelines used for the definition of hazardous materials/hazardous wastes, as used in this report, are referenced in the California Code of Regulations (CCR) "Title 22, Division 4.5". The report has been prepared in general accordance with the procedures presented in ASTM E1527 - 13 (Standard Practice for Environmental Site Assessment: Phase I Environmental Site Assessment Process) and ASTM E2600-10 (Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions).

1.3 Credentials

This report has been prepared by AGE under the professional supervision of the project manager whose name and signature appears on the letter of transmittal. The information presented in this report has received appropriate technical review, and the opinions represent professional judgements which are based upon an interpretation of the data gathered during this Phase I ESA study and AGE's experience in geotechnical and environmental consulting engineering services.

1.4 Geologic Conditions

The proposed bikeway alignment traverses level to very gently sloping terrain in the South Bay, along the western edge of the Nestor marine terrace. The published geologic maps indicate that the majority of the alignment is underlain by undivided Old Paralic Deposits of late to middle Pleistocene age (Kennedy and Tan, 2008). These deposits are also referred to as undivided Bay Point Formation and an unnamed, nearshore marine sandstone (Kennedy and Tan, 1977). The deposits are generally described as poorly sorted, moderately permeable, reddish-brown, interfingering strandline, beach, estuarine and colluvial deposits composed of siltstone, sandstone and conglomerate that rests on the Nestor Terrace.

Young Alluvial Deposits of Holocene to late Pleistocene age (Kennedy and Tan, 2008) are mapped at the southerly terminus of the alignment. The alluvium is a flood plain deposit associated with the Otay River to the south. The deposits are described as poorly consolidated, poorly sorted, permeable flood plain deposits of sandy, silty, or clay bearing alluvium.

Artificial man-made fill is mapped west of the bikeway alignment. The fill is primarily associated with development of the existing large-scale salt mining operation in the south portion of San Diego Bay. There are no known (mapped) faults or landslides along the bikeway alignment.

A review of the U.S. Department of Agriculture (USDA) Soil Survey Geographic database (SSURGO) data base indicates that the project site is underlain by Class D (very slow infiltration) soils with 35% or less passing the U.S. Standard #200 sieve. Corrosion potential is generally considered high. Visual observation of the exposed cuts in the vicinity of the project site indicates that the site is primarily underlain by Class D soil.

1.5 Hydrogeologic Conditions

The project site lies within the Otay Hydrologic Area of the Otay Hydrologic Unit (HU) as designated by the California Regional Water Quality Control Board (CRWQCB), San Diego Region (9). Groundwater in this area has a potential beneficial use for agricultural, municipal and industrial supply.

The Otay HU is approximately 160 square miles, and is comprised of the Coronado, Otay, and Dulzura Hydrologic areas. The major drainage system in the Otay HU is the Otay River and its tributaries. Lower Otay Reservoir is also within the HU, and is the terminus of the second San Diego Aqueduct. Major population centers in the western portion of the Otay HU include the City of Coronado, portions of the Cities of Imperial Beach and Chula Vista, and portions of the South Bay communities of Palm City and Otay Mesa in the City of San Diego. The eastern portion of the HU is largely rural, and includes the small communities of Dulzura and Engineer Springs.

Depth to groundwater along the bikeway alignment is anticipated to be at or slightly above the water level in San Diego Bay, and is expected to change on a daily basis in response to tidal fluctuations. Shallow perched water conditions may also occur in certain areas along the project alignment, especially during the wet seasons. Groundwater monitoring was performed at an ARCO service station located at 800 Palomar Street (approximately 1/8 mile east of the northern terminus of the bikeway alignment) by Stantec between 2004 and 2012. Stantec monitored a total of nine wells, and reported groundwater at elevations varying between approximately +7.65 feet msl and +11.00 feet msl (2012).

The project alignment is not located within the 100 and/or 500 year flood zones (EDR, 2014). The 100 year flood zone is located immediately west of the alignment, encompassing the adjacent salt mining operation, with the 100 and 500 year flood zones located to the south and east of the project alignment within the Otay River valley.

2.0 SCOPE OF WORK

The scope of this Phase I ESA study included the performance of several tasks which are more fully described in the following sections.

2.1 Records Review

In order to assess whether current or past land uses at or adjacent to the project site may have created a potential for contamination of the project site, we performed a review of readily available public records maintained by various Federal, State, and Local environmental regulatory agencies. The database search was performed by Environmental Data Resources, Inc. (EDR). An electronic copy of EDR's Radius Map Report is presented in Appendix A. The limit of the database search which extends one mile from the project alignment is shown on the EDR Data Map which is included in the Radius Map Report.

The available database records were reviewed for the following areas:

- To 1.0 mile outside the limits of the project site for registered underground storage tanks (USTs) and Resource Conservation and Recovery Act (RCRA) generators;
- To 1.0 mile outside the limits of the project site for leaking USTs, landfill sites, and Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) sites; and
- To 1.0 mile outside the limits of the project site for RCRA treatment, storage and disposal facilities, and State and Federal superfund sites.

A description of the databases searched by EDR is presented on Pages GR-1 through GR-43 of the EDR report. A summary of the sites of potential concern identified in the EDR report is presented on pages 8 through 179 of the EDR report. The approximate locations of these sites are shown on the EDR Data Map.

EDR was also requested to provide historical topographic maps, aerial photographs, city directory abstract and Sanborn Fire Insurance Maps. The Historical topographic maps and aerial photographs were used to evaluate historical development and land usage along the project alignment.

The City Directory Abstracts provide detailed historical information for the surrounding area along the project alignment. Published for United States cities and towns since the 18th century, city directories identify the property name and use, such as gas stations and dry cleaners. Dating from the early 1800's these directories provide key historical information on the occupancy history via a "reverse phone directory" in which streets are listed alphabetically and occupants are shown for each street number listed.

The Sanborn Maps were originally created for assessing fire insurance liability in urbanized areas in the United States. The maps include detailed information regarding town and building information in approximately 12,000 US towns and cities from 1867 to 2007. The Sanborn maps themselves are large-scale lithographed street plans at a scale of 50 feet to one inch (1:600) on 21 by 25 inches (53 by 64 cm) sheets of paper. The maps were published in volumes, bound and then updated until the subsequent volume was produced. Today, Sanborn maps are primarily used for historical research. EDR, however, reported that no historical Sanborn Fire Insurance Maps are available for the project alignment and surrounding area.

Copies of the topographic maps, aerial photographs, city directory abstract and EDR Certified Sanborn Map Report are also included in Appendix A.

2.2 Site Reconnaissance

Messrs. Nicholas Barnes and Sani Sutanto from AGE conducted a site reconnaissance visit on August 11, 2014. The purpose of this site reconnaissance was to observe the existing site conditions with regard to the presence of the Recognized Environmental Conditions (RECs) which were identified in the EDR report as discussed in this report.

Pursuant to ASTM E 1527-13, a REC is described as the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.

The term includes the presence of hazardous substances or petroleum products even under conditions in compliance with laws and regulations. The term is not intended to include de minimis conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

A summary of our site reconnaissance is presented herein. Selected photographs taken during the site reconnaissance visit are presented in Appendix B. The sites discussed herein are identified by their EDR Map ID numbers.

Our site reconnaissance started at ARCO Service Station at 800 Palomar Street (EDR Map ID Nos. 36 - 41) which is currently active, and proceeded west along Palomar Street to Bay Boulevard. We then continued along Bay Boulevard which is bounded to the south by the South Bay Salt Works (EDR Map ID Nos. C4, B5, B15, and B17). The South Bay Salt Works facility also includes a maintenance yard located on the east side of Bay Boulevard, across from the main entrance to the facility. A 10,000-gallon above ground fuel tank was observed at the maintenance yard.

The site reconnaissance then continued east along Anita Street, then north along West Frontage Road to the CAL MEX facility (EDR Map ID No. 29) which is now a residential duplex. The reconnaissance then head south along West Frontage Road to Main Street, then east across Interstate 5, north along Silvan Street, and west along Anita Street to La Salle Trucking (EDR Map ID No. N65 - N68). The site is currently occupied by Seagate Produce. The remainder of reconnaissance consist of a drive by along Industrial Boulevard and Hollister Street.

In addition to the visual indications of the presence of underground storage tanks and/or activities involving the usage, storage or disposal of hazardous materials within the properties which are discussed in Table 1, we also observed some monitoring wells installed on the properties. Surficial staining typical of leaking vehicle undercarriages was observed on asphalt and concrete pavement in areas throughout the project study area. Additionally, retail quantities of paints and/or cleaning or maintenance products and scattered debris were observed at several construction sites within the project study area. However, no chemical odors were detected during the reconnaissance.

Existing improvements observed during the field reconnaissance range from single and multi family residences, retail and office complexes, railroad track, park and recreation facilities, and several large warehouse and manufacturing facilities.

2.3 Data Interpretation and Reporting

This task involves the preparation of a written report to present a summary of our findings, opinions and recommendations based on the information gathered from our site reconnaissance and records review.

3.0 GOVERNMENTAL AGENCIES RECORDS REVIEW**3.1 Environmental Data Resources Radius Map Report**

For the purpose of this study, AGE retained the services of Environmental Data Resources (EDR) to conduct a search of Federal, State and Local environmental regulatory agency databases in conformance with the ASTM E1527 - 13 search parameters.

3.2 Records Review

Records with regard to the history/background and current status information for the sites of concern were obtained from the Geotracker website database records.

3.3 Historic Aerial Photographs, Topographical and Sanborn Maps

Available aerial photographs and topographical maps pertaining to the general site area were reviewed to assess historical usage of the project site and surrounding areas. Historical aerial photographs that were reviewed cover the years 1953, 1966, 1974, 1980, 1990, 1994, 2005, 2009, 2010 and 2012. Topographical maps that were reviewed cover the years 1904, 1930, 1943, 1953, 1967, 1975, 1991 and 1996. City directory abstract covers the years from 1903 through 2013. No historical Sanborn Fire Insurance Maps are available for the project area.

4.0 SITE HISTORY

The proposed bikeway alignment is located immediately east of south San Diego Bay, north of the Otay River. The South Bay Salt Works abuts the alignment to the west. The salt works site is approximately 1300 acres in size, and lies within the South San Diego Bay unit of the San Diego National Wildlife Refuge-Complex (NWR), United States Department of Interior Fish and Wildlife Service (USFWS). Several species of threatened or endangered birds live or feed in the salt ponds.

A review of the 1904 topographic map shows a community named “Fruitdale” in the general vicinity of the bikeway alignment. The map also depicts a street that appears to be Bay Boulevard but the street is not named. No other nearby streets are shown. The San Diego and Arizona Eastern Railroad (SD&AE) which parallels the northern portion of the proposed bikeway alignment along Bay Boulevard was in existence but was referred to as the “Coronado Railroad”. The salt evaporation ponds are not shown, although our research indicates that the salt mining had been ongoing since the 1870s.

The 1930 topographic map depicts Bay Boulevard, Main Street, Anita Street, and Dorothy Street within the community of Fruitdale. The map also depicts tidal marshes in San Diego Bay immediately west of Bay Boulevard, and shows the SD&AE railroad tracks (now referred to as the Southern Pacific Lines) crossing the tidal marsh. The salt evaporation ponds are not depicted, but a place name of La Punta is shown at the present day location of the ponds. The salt mining company was originally named La Punta Salt Works.

The salt works are named on the 1943 topographic map, and a solid area of land is shown on the map at the present day location of the salt evaporation ponds. No tidal marshes are shown. The map also depicts several additional side streets in Fruitdale, including Ada and Palomar Streets. The railroad was then referred to as both SD&AE and Southern Pacific.

By 1953 Interstate 5, also referred to as the “Montgomery Freeway”, had been built east of Bay Boulevard. The freeway was originally only two lanes in each direction, and bisected Anita, Dorothy, Ada and Palomar Streets. New frontage roads were constructed on both sides of the freeway. Freeway access from Palomar Street was by way of the frontage roads. At that time Palomar Street did not continue eastward into Chula Vista, and the Palomar Street freeway bridge had not been built. Entrance and exit ramps at Main Street were also configured differently than today’s freeway. The railroad is referred to as SD&AE.

By 1967 a freeway bridge had been built on Palomar Street over I-5, and Palomar Street had been extended eastward into Chula Vista. Freeway entrance and exit ramps on Palomar Street had been re-aligned, which included building two circular ramps north of Palomar Street on either side of the freeway. No changes had been made to the Main street entrance and exit ramps. The community name of Fruitdale was no longer shown on the 1967 map. Several structures which appear to represent the South Bay Power Plant are shown on the map but were not named.

By 1975 I-5 had been widened to 4 lanes in each direction, and the freeway interchanges at Main and Palomar Streets had been rebuilt to their present configurations. Streets in the adjacent community also appear similar to their present day configurations, and appreciable residential and commercial developments had been added along the I-5 corridor, with most of the commercial development located between Anita and Main Streets. Some additional residential and commercial development

occurred between 1975 and 1990. No significant developments occurred in the immediate vicinity of the bikeway alignment from 1990 to the present day, aside from some residential redevelopment projects east of I-5.

The salt works has been in existence since the early 1870s and were previously known as La Punta Salt Works (1871-1901), Western Salt Works (1902-1999), and South Bay Salt Works (2000 - present time) (NPS, undated). Most of the original salt works structures and evaporation ponds were severely damaged by the “Hatfield” floods of 1916 which ruptured the original Lower Otay Dam. The facility was rebuilt in the following years, and many of the rebuilt structures exist to this day. The facility included a narrow gauge railroad to transport the salt during harvesting, but the track was eventually dismantled in the 1970s.

The SD&AE railroad that abuts the west side of the bikeway alignment reportedly dates to the 1880s (NPS, undated). The railroad stimulated bayside industrial and residential growth in the South Bay, helping to create the communities of Chula Vista, Oneonta (Imperial Beach), and Otay. During the late 1800s and early 1900s the inland portions of Chula Vista and Otay Mesa were largely rural, and agriculture was the primary business (www.sandiego.org).

Agriculture gradually became replaced by residential and commercial development which accelerated following World War II over much of San Diego County including the South Bay. The 1953 aerial photograph shows a mixture of agricultural and residential development in the vicinity of the proposed bikeway alignment and in adjoining areas to the east. The salt works and evaporation ponds are visible in the photo, and appear similar to the present day photo. The Interstate 5 freeway is shown on the 1953 photograph but had only 2 lanes each direction at that time.

Construction of the South Bay Power Plant was initiated in 1958. Unit 1 became operational in 1960, followed by Units 2, 3, and 4 in 1962, 1964 and 1971, respectively (www.portofsandiego.com). The power plant site is located approximately 0.6 miles north northwest of the bikeway alignment. The power plant was shut down in 2010, and demolished in 2013. The City of Chula Vista Master Plan envisions redevelopment of the power plant property with a public park, RV park, an industrial park, and buffer zones following completion of site remediation for potential contaminants.

5.0 DISCUSSION, FINDINGS AND OPINIONS

Based on the results of this ESA study, we would like to present the following summary of our findings, opinions and recommendations with regard to the historic and current environmental conditions and issues at the project site.

5.1 Low Risk Sites

The EDR report lists a total of 82 sites in the project study area as having potential environmental risks. Some of the listings are duplicates due to changes in ownership, and some listings merely provide a history of property names over the years. Further information regarding these sites was obtained from Geotracker and from our site reconnaissance to determine the potential risk posed by these sites. Based on a review of the available background information and visual site observations, it is our opinion that, the majority of the sites identified in the EDR report are not likely to pose a major environmental hazard to the proposed project alignment. A summary of these low risk sites is presented in Table 1 on the next page.

TABLE 1
Listing of Low Risk Sites

EDR Map ID	Site Name/ Address	Description	Reasons for Low Risk Designation
A1, A9 & A10	R & L Performance Auto Service 887 Palomar Street Chula Vista, CA 91911	Auto shop.	Permitted as small quantity generator and has received citations mainly pertaining to administrative and waste handling issues. No USTs.
A6	887 Palomar Street Chula Vista, CA 91911	Storm drain inlet	300,000 gallons fire water suppression runoff from a fire that occurred on 10/21/2006. This incident happened more than 7 years ago and is not expected to impact the project alignment.
B2 & B3	Von's & Brownie's Trucking 1470 Bay Boulevard, Lot 4 Chula Vista, CA 91911	Trucking company.	Oxygenated solvent wastes maintained on-site. No UST's.
B7	H.G. Sent, Inc. 1470 Bay Boulevard Chula Vista, CA 91911	Waste handling.	Recycling of waste oil, hydrocarbon solvents, and off-specification, aged or surplus organics at South Bay Salt Works. No USTs.
C8	GGTW LLC. 1475 Bay Boulevard Chula Vista, CA 91911	Waste handling.	Facility treats or disposes of liquid and/or semisolid wastes. Considered a minor threat to water quality. No USTs.
A11	881 Palomar Street. Chula Vista, CA 91911	Business name listing only.	Listing of prior and past business names from 2004 to 2012.

TABLE 1
Listing of Low Risk Sites

EDR Map ID	Site Name/ Address	Description	Reasons for Low Risk Designation
12	1623 Frontage Road. Otay, CA	Accident report.	Vehicle hit a transformer and fire hydrant on 3/28/2003. Approximately 70 gallons of mineral oil discharged into drainage ditch and nearby waterway. Incident occurred in southerly portion of project alignment. Minor release not expected to impact the project alignment.
A13	Alpha Engine Rebuilders/Auto S 887 Palomar Street Chula Vista CA 91911	Auto shop.	Small quantity generator. No UST's.
B14	Arbor West, Inc. 895 Ada Street Chula Vista, CA 91911	Business	Small quantity generator of unspecified oil containing wastes. No UST's.
B15	HG Fenton Co. 1470 Bay Boulevard Chula Vista, CA 91912	Business	Organic solids, unspecified oil containing wastes and contaminated soils were removed from site from 1997-1999. No UST's.
D16 &D18	Kar's Machine Shop 876 Ada Street Chula Vista, CA 91911	Machine shop.	No UST's.
E19	Palomar Gas and Car Wash 878 Stella Street Chula Vista, CA 91911	Car wash.	No USTs.

TABLE 1
Listing of Low Risk Sites

EDR Map ID	Site Name/ Address	Description	Reasons for Low Risk Designation
E20	Cogswell Marine & Motorsports, Inc. 865 Stella Street Chula Vista, CA 91911	Waste handling.	Generates organic solids and unspecified organic liquids for offsite treatment or incineration. No UST's.
D21	A & C Machine Shop & Auto Repair 876 Ada Street Chula Vista, CA 91911	Auto shop.	No UST's.
B23	Apex Bulk Commodities, Inc. 1470 Bay Boulevard Chula Vista, CA 91911	Business	Violations for improper hazardous waste disposal. No UST's.
24	KSWB 5 1696 Frontage Road Chula Vista, CA 91911	TV Station.	Unspecified organic liquid mixture disposed of at transfer station. No UST's.
25 & H44	Shell Oil Service Station 801 Palomar Street Chula Vista, CA 91911	Auto shop.	Licensed large quantity generator of hazardous waste. No record of USTs.
26, 27 & 28	866 Elise Street Chula Vista, CA 91911	Unknown.	Listing of historic auto shop.

TABLE 1
Listing of Low Risk Sites

EDR Map ID	Site Name/ Address	Description	Reasons for Low Risk Designation
29	CAL MEX 869 Dorothy Street Chula Vista, CA 91911	Gas station.	Two USTs were removed in 1994. Case was opened in 1994 and closed in 1996. Media affected limited to soil only. The site located less than 1/8 mile east (upgradient) from the project alignment. Considering that the release was limited to soil only and the age of the release, this case is not anticipated to impact the project alignment. Furthermore, the site is currently occupied by a residential duplex.
F30	1550 Frontage Road Chula Vista, CA 91911	Unknown.	Listing of historic auto shop.
31	Western Magnesium 1135 Bay Boulevard Chula Vista, CA 91911	Business.	Soil contamination only. Western Magnesium entered into a voluntary Cleanup Agreement in 1995. No contaminants were found. Department of Toxic Substances Control (DTSC) determined that the site does not pose a threat to human health or the environment. "No Further Action" status granted in 1995.
32	1515 Frontage Road Chula Vista, CA 91911	Unknown.	Listing of historic auto shop.
G33	1150 Walnut Avenue Chula Vista, CA 91911	Unknown.	Listing of historic auto shop.

TABLE 1
Listing of Low Risk Sites

EDR Map ID	Site Name/ Address	Description	Reasons for Low Risk Designation
H34	Palomar Mobil Service 796 Palomar Street Chula Vista, CA 91911	Unknown.	Listing of historic auto shop.
I35 & I47	Mesa Microwave, Inc. 2232 Verus Street, Ste F & G San Diego, CA	Business.	No USTs.
G42	FTC 1165 Walnut Avenue San Diego, CA	Business	Small quantity generator. No USTs.
J43	Lots on Ada Street, 808 Ada Street Chula Vista, CA 91911	Empty lot	The parcels were previously occupied by single-family residences but are now vacant and fenced. A report by BB Environmental (2014) revealed that levels of chlorinated pesticides in shallow soils on site exceed Office of Environmental Health Hazard Assessment for residential setting. No USTs. The parcels are located greater than 1/8 mile east of the project alignment.
45	Home Depot USA Inc. HD WC0015 2201 Versus Street San Diego, CA 92154	Retail facility.	No USTs.

TABLE 1
Listing of Low Risk Sites

EDR Map ID	Site Name/ Address	Description	Reasons for Low Risk Designation
K48	Security Environmental Systems, Inc. 803 Anita Street Chula Vista, CA 91911	Business	No USTs.
H49	790 Palomar Street Chula Vista, CA 91911	Unknown.	Listing of historic auto shop.
H50	Palomar Trans 780 Palomar Street, Ste. G Chula Vista, CA 91911	Auto shop.	No USTs.
H51	Lots in Ada Street 808 Ada Street Chula Vista, CA 91911	Empty lot	Pesticide and chlorinated hydrocarbon contamination in soil only. Case was closed in 2013. The site is located 1,100 feet east of the project alignment. Contamination is limited to soil only and not expected to impact the project alignment.
K52 & K53	Circuit Technology, Inc. 789 Anita Street Chula Vista, CA	Business	No USTs.
L54	7005 Alamitos Ave. San Diego, CA 92154	Unknown.	Listing of historic auto shop.

Listing of Low Risk Sites

EDR Map ID	Site Name/ Address	Description	Reasons for Low Risk Designation
K56 & K57	Bay Bridge Brewing 779 Anita Street Chula Vista, CA	Brewery	One UST installed in 1970 and removed in 1987. No release reported. Site is located 1,200 feet east of the project site.
58	Custom Printing Inks Ltd. 7025 Alamos Avenue San Diego, CA	Business	No USTs.
59	WMC Corp. 1150 Bay Boulevard Chula Vista, CA	Business	Archived site. Completed in 1990.
60	CIMA Property 765 Palomar Street Chula Vista, CA 91911	Empty lot.	Pesticide contamination in soil only. Case was closed in 2013. The site is located 1,500 feet east of the project alignment. Contamination is limited to soil only and not expected to impact the project alignment.
61	Mims Plating 2244 Main Street Chula Vista, CA 91911	Industrial	Cadmium contamination in soil at abandoned plating facility. County of San Diego Department of Environmental Health (DEH) determined that the metal does not pose a threat to groundwater due to its lack of mobility. Case was closed on 11/03/2011. The site is located 1,500 feet east of the project alignment. Contamination is limited to soil only and not expected to impact the project alignment.

TABLE 1
Listing of Low Risk Sites

EDR Map ID	Site Name/ Address	Description	Reasons for Low Risk Designation
M62 & M63	Public Storage Facility (Meth Case) 2317 Main Street Chula Vista, CA 91911	Public storage	An illegal drug lab produced methamphetamine in Unit C-99 at this storage facility. The County of San Diego DEH concluded that drug residue at site was mitigated. Case was closed as of 3/8/2011. The site is located 2,000 feet southeast of the project alignment. The case is not expected to impact the project alignment.
64	Terra Bella Nursery, Inc. 302 Hollister Street San Diego, CA	Nursery	No USTs.
N65 - N68	LaSalle Trucking 684 Anita Street Chula Vista, CA 92011	Trucking company.	Eight USTs were removed between 1990 and 2004. Case was closed on 05/08/1996. The site is located 2,200 feet northeast of the project alignment. The case is not expected to impact the project alignment. Furthermore, the site is currently occupied by Seagate Produce Company.
69	West Auto Wreckers 2365 Main Street Chula Vista, CA 91911	Auto wrecker.	Unspecified soil contamination. Received "Case Closure" status from the County of San Diego DEH in 2001. The site is located 2,200 feet northeast of the project alignment. The case is not expected to impact the project alignment.

TABLE 1
Listing of Low Risk Sites

EDR Map ID	Site Name/ Address	Description	Reasons for Low Risk Designation
70	RTA International 1008 Industrial Boulevard Chula Vista, CA 91911	Business	<p>A UST was removed on March 27, 2007, at which time approximately 40 cubic yards of hydrocarbon impacted soil was also removed. Ongoing monitoring indicates that hydrocarbons in soil are stable, and that dissolved phase hydrocarbons in groundwater are stable or decreasing. Received “Case Closure” status from the County of San Diego DEH in 2014.</p> <p>The site is located 2,400 feet north of the project alignment. The case is not expected to impact the project alignment.</p>
71	RePlanet LLC 660 Palomar Street Chula Vista, CA 91911	Recycling facility.	No USTs.

TABLE 1
Listing of Low Risk Sites

EDR Map ID	Site Name/ Address	Description	Reasons for Low Risk Designation
O72 through O77	California Commercial Asphalt 387 Hollister Street San Diego, CA 92054	Asphalt factory	<p>Seven USTs were removed in 1991 and 1999. During removal of two diesel tanks in 1999, contamination was detected based on analytical testing. Approximately 252 cubic yards of soil was removed. Ground water monitoring and testing indicate no ground water risks. Received "Case Closure" status from the County of San Diego DEH in 2002.</p> <p>The site is located 2,500 feet southeast of the project alignment. The case is not expected to impact the project alignment.</p>
78	Bay View RV and Boat Storage 995 Bay Boulevard Chula Vista, CA 91911		<p>Contamination of soil only with waste, motor, hydraulic and lubricating oils. County of San Diego DEH letter dated November 21, 2012 indicates the case is open, and that DEH must be notified if excavation or redevelopment is planned.</p> <p>The site is located 2,600 feet north of the project alignment. The case is not expected to impact the project alignment.</p>

TABLE 1
Listing of Low Risk Sites

EDR Map ID	Site Name/ Address	Description	Reasons for Low Risk Designation
P79 - P81	Duke Energy- South Bay Power Plant 990 Bay Boulevard Chula Vista, CA 91911	Former Power Plant facility.	Site of former power plant which was demolished on February 2, 2013. While in operation the facility was a large scale generator of hazardous waste, including the release of smokestack emissions. A prior LUST soil contamination case was closed in 1988. Site is classified as a Toxic Pit Site suspected of containing hazardous wastes. Site remediation is currently ongoing. The site is located approximately 0.6 miles north of the project alignment. Considering that the flow of groundwater beneath this site is not likely to go southwards, this case is not expected to impact the project alignment.
82	Ratner Corporation 642 Arizona Street Chula Vista, CA 92011	Business	Prior unauthorized release of diesel contamination affecting soils only was investigated in 1992 and received "Case Closure" status from the County of San Diego DEH in 2004. An earlier unauthorized release of undisclosed nature was closed by the County of San Diego DEH in 1996. Site located approximately 4,000 feet northeast of bikeway alignment. The case is not expected to impact the project alignment.

5.2 High Risk Sites

The sites discussed below is considered to pose a high risk for environmental contamination to the proposed bikeway alignment.

5.2.1 ARCO Service Station at 800 Palomar Street, Chula Vista, CA 91911 (EDR Map ID Nos. H36 - H41)

Soil contaminants consisting of petroleum hydrocarbons and MTBE were discovered at the site in March 2003 during dispenser and product line replacement activities. Based on the contamination, Site Assessment and Mitigation (SAM) Case No. H20112-001 was opened in June 2003. The report prepared by Stantec (2012) determined that the majority of hydrocarbon impacted soil contamination remained on-site. MTBE concentrations greater than 1mg/kg in soil was found at depths between 40 and 45 feet bgs in the southerly portion of the site, possibly extending offsite below Walnut Avenue and Palomar Street. Stantec also determined that dissolved benzene and MTBE in groundwater largely remained on-site, with the concentrations attenuating a short distance offsite. Groundwater flow at the site was determined to be in a northwesterly direction. The site elevation is approximately 51 feet higher than the project alignment, and depth to groundwater at the site varied from 37.7 to 46.13 feet below ground surface (bgs).

Stantec recommended conducting a sensitive receptor survey and corrective action plan. Stantec reported that this may conclude that natural attenuation is the recommended means of remediation at the site, and a possible recommendation that the site be considered for no further action. Stantec also recommended continuing the groundwater monitoring program.

Based on the Stantec findings, it appears unlikely that hydrocarbon contamination from the ARCO site will affect the project alignment. Furthermore, the ARCO site is located across Interstate 5, approximately 1/8 mile east of the northern terminus of the bikeway alignment, and the soil and groundwater contamination is reported to be largely confined to the immediate footprint of the service station site. Additionally, the report states that groundwater flow at the ARCO site is in a northwesterly direction, which is in a direction away from the bikeway alignment. However, it must be noted that large volume dewatering operations at the project site may result in migration of contaminated ground water from the ARCO site towards the project alignment.

5.2.2 South Bay Salt Works, 1470-1475 Bay Boulevard, Chula Vista, California (EDR Map ID C4, B5, B15, and B17).

The South Bay Salt Works abuts the west side of the bikeway alignment along Bay Boulevard and West Frontage Road. The EDR database indicates that in 1997 approximately 0.2 tons of contaminated soil from a site cleanup was disposed of at a transfer station. In 1998, three underground storage tanks were removed from the site. There are no reports of leaks/releases from the tanks. The database also indicates that hazardous materials which include hydrocarbon solvents, waste oil and mixed oil, and off specification, aged or surplus organics were transported from the site during the periods from 1998 to 2002, and between 2008 and 2012.

The facility also received two administrative violation citations in 2012; one citation for not maintaining hazardous waste receipts/manifests on-site for 3 years, and a second citation for not maintaining personnel training documents. No air pollution or other air quality issues pertaining to the salt mining operations are contained in the EDR records.

It must be noted, however, that under certain atmospheric conditions, there may be a potential health hazard from airborne particles originating from the salt ponds. The degree of public health risk is dependent on the type, frequency and duration of exposure and can therefore be anticipated to be low to very low for people who infrequently or only occasionally use the bikeway.

A telephone interview was conducted on September 9, 2014 with Mr. Warren Dodd, who is part of the ownership group of the South Bay Salt Works. Mr. Dodd informed us that he had no additional information to add to our existing information.

5.3 Interviews with Cities of Chula Vista and San Diego

A telephone interview was conducted on September 11, 2014 with Mr. Tim Ripley, Public Works Manager for the city of Chula Vista. Mr. Ripley informed us that the city has no underground utilities along Bay Boulevard, but that sewer and storm drains are present along West Frontage Road. The City of Chula Vista's public work activities along Bay Boulevard are limited to pavement repair and resurfacing. Mr. Ripley is not aware of any contamination which was encountered during past excavations associated with the construction and installation of the sewer and storm drain facilities along West Frontage Road. Mr. Ripley also informed us that household items were occasionally illegally dumped near the intersection of Bay Boulevard and Anita Street. The dumped items are removed by city personnel. The City of Chula Vista does not maintain a record of the removed household items.

We also conducted a telephone interview with Mr. Bryan Genovese, Senior Engineer for the City of San Diego's Transportation and Storm Water Department, on September 12, 2014. Mr. Genovese stated that to his best recollection, the City of San Diego does not have any improvements along Bay Boulevard and West Frontage Street. Therefore, he is unable to provide any information with regard

to the potential of encountering hazardous soil and groundwater along these two streets. To provide more definitive answer would require additional research which should be requested by the SANDAG's project manager through the City of San Diego's liaison for the project.

5.4 Conclusions

The ARCO Service Station is located approximately 1/8 mile east of the project alignment, and the case is currently open and involves groundwater contamination. However, the ARCO Service is located across the Interstate 5, and groundwater flow at the site is in a northwesterly direction. It is unlikely that groundwater contamination from the ARCO site to impact the proposed project. It must be noted, that in the event that large volume dewatering operations are performed, either for the proposed project or any nearby projects, there is a potential that contaminated groundwater may migrate toward the project alignment. We do recommend, that in the event that dewatering is performed for construction of the project, it is recommended that the groundwater be tested for the presence of hazardous substances. The contractor should be prepared to handle and dispose of such materials in accordance with current industry practices and applicable Local, State and Federal regulations.

The last three USTs at the South Bay Salt Works were removed in 1998 and groundwater flow is in a westerly direction. It is unlikely that these USTs will impact the proposed project. Currently the South Bay Salt Works uses an above ground storage tank (AST). The AST is located in their maintenance yard on the east side of Bay Boulevard. No visual observations of long term leaks/releases from the AST were observed at the time of our site reconnaissance. The DEH inspection records did not indicate any leaks/releases in connection with the AST. Therefore, it is our opinion that the presence of the AST is not likely to impact the proposed project. It is noted that during high wind, airborne particles from the salt ponds may drift toward the project alignment.

6.0 LIMITATIONS

This Phase I ESA report has been prepared for the sole use of Quality Infrastructure Engineering and SANDAG. The information obtained is only relevant for the dates of the records that were reviewed and as of the date of our last site visit on August 11, 2014. Consequently, this report will require periodic updates as conditions within the project study area may change or as additional information becomes available. Other parties who use or rely on the findings and conclusions of this report shall do so at their own risk. Furthermore, because the scope of this Phase I ESA was limited, it is possible that currently unrecognized conditions or contamination might exist at the project site.

AGE has performed this assessment in accordance with the authorized scope of work and generally accepted practices in the field of environmental consulting engineering. No warranties, either expressed or implied, are made by AGE. The records search performed for this study was limited to information available from public sources. This information is subject to continuous change and is frequently incomplete. Unless AGE has actual knowledge to the contrary, information obtained from interviews or provided to AGE by the regulatory agencies has been assumed to be correct and complete. AGE does not assume any liability for misrepresentation of information or for items not visible, accessible, or present at the project site at the time of our site reconnaissance visit.

There is no investigation which is thorough enough to preclude the presence of substances on the subject property which presently, or in the future, may be considered hazardous. Because regulatory agency evaluation criteria are constantly changing, concentrations of contaminants that are currently considered to be acceptable may, in the future, become subject to different and more stringent regulatory standards.

Where records indicate that prior remedial work or tank removals have occurred, there is a risk that the work may not have been performed correctly or completely. In these cases, if the regulatory agency has approved the closure of the tank or other work done, we have assumed that the work was done properly and in complete conformance with said regulatory agency standards.

Professional opinions, conclusions, and judgments expressed in this report are based on AGE's understanding and interpretation of current regulatory standards and the available historical information and documents reviewed, and visual observations of the current conditions at the project site, and should not be construed as legal opinions.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Allied Geotechnical were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- Library of Congress
- University Publications of America
- EDR Private Collection

The Sanborn Library LLC Since 1866™

Limited Permission To Make Copies

Allied Geotechnical (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1903 through 2013. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site List

EXECUTIVE SUMMARY

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 10/25/2013 has revealed that there is 1 CERC-NFRAP site within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/11/2014 has revealed that there are 9 RCRA-SQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

CA ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the CA ENVIROSTOR list, as provided by EDR, and dated 06/05/2014 has revealed that there

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not

EXECUTIVE SUMMARY

limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there are 14 EDR US Hist Auto Stat sites within approximately 0.25 miles of the target property.

EDR US Hist Cleaners: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Cleaners list, as provided by EDR, has revealed that there is 1 EDR US Hist Cleaners site within approximately 0.25 miles of the target property.

 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Hazardous Waste Summary:

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D006
Waste name: CADMIUM

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D000
Waste name: Not Defined

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D018
Waste name: BENZENE

Violation Status: No violations found

FINDS:

Registry ID: 110012232066

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Lead Agency: SAN DIEGO COUNTY LOP
Case Worker: EP
Local Agency: SAN DIEGO COUNTY LOP
RB Case Number: Not reported
LOC Case Number: H20112-002
File Location: Local Agency
Potential Media Affect: Aquifer used for drinking water supply
Potential Contaminants of Concern: Gasoline
Site History: Contamination was identified on site in March 2003 during dispenser and product line replacement activities. Monitoring wells were installed to evaluate the groundwater contamination on site. Additional assessment is currently being evaluated. Please see the Environmental Data tab for additional site specific information.

Handler Activities Summary:

U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Hazardous Waste Summary:

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Violation Status: No violations found

 Lead Agency: SAN DIEGO COUNTY LOP
 Case Worker: CB
 Local Agency: SAN DIEGO COUNTY LOP
 RB Case Number: Not reported
 LOC Case Number: 207750-001
 File Location: Local Agency
 Potential Media Affect: Soil
 Potential Contaminants of Concern: Gasoline
 Site History:

On March 28, 2007 a 550 gallon Underground Storage Tank was removed from this site. During the tank removal process, an over excavation was conducted to remove hydrocarbon impacted soil. Approximately 40 cubic yards of impacted soil was removed. Confirmation sampling at the bottom of the excavation was conducted. Laboratory results indicated Total Petroleum Hydrocarbons as gasoline (TPHg) concentrations of 4,800 milligrams per kilogram (mg/kg) and Total Petroleum Hydrocarbons as Diesel (TPHd) of 3,900 mg/kg. Based on these results Unauthorized Release Case 207750-001 was opened. An initial investigation of soil and groundwater was conducted on March 8, 2012. This investigation consisted of the installation of one

groundwater monitoring well installed in the area of highest TPHg impacts. Two additional soil borings were advanced to delineate the lateral extent of hydrocarbon impacts to soil. Results indicated concentrations of TPHg ranging from ND to 2,200 mg/kg, TPHd ranging from ND to 2,500 mg/kg, and benzene concentrations from ND to 28 mg/kg. On August 22, 2013, additional site assessment was conducted to further delineate the lateral extent of hydrocarbons in soil. As part of this assessment, three soil borings were advanced. Results indicated concentrations of TPHg ranging from ND to 130 mg/kg, TPHd ranging from ND to 10 mg/kg. All other Volatile Organic Compounds were below laboratory limits. Based on these results, the consultant estimates approximately 15 cubic yards of hydrocarbon impacted soil remain at the site. The site is located in a basin designated for beneficial agricultural uses with potential municipal and industrial supply uses. Groundwater flow direction is estimated towards the west. Quarterly groundwater monitoring and sampling was conducted from March 2012 to November 2013. Results of groundwater sampling indicated TPHg concentrations ranging from 520 micrograms per liter (g/L) to 2,400 g/L, TPHd concentrations ranging from 540 g/L to 3,400 g/L, and benzene concentrations ranging from 1.1 g/L to of 6.4 g/L. Analysis for oxygenates were all below laboratory reporting limits. The consultant concludes that hydrocarbon impacts to soil are limited and that dissolved-phase concentrations in groundwater are stable and/or decreasing. The consultant recommends closure of this case, DEH concurs with their recommendation.

Case Type: Cleanup Program Site
Case Worker: JPA
Local Agency: DEPARTMENT OF TOXIC SUBSTANCES CONTROL
RB Case Number: 4090006
File Location: DTSC
Potential Media Affected: Other Groundwater (uses other than drinking water), Soil, Under Investigation
Potential Contaminants of Concern: Other Chlorinated Hydrocarbons, Copper, Other Metal, Heating Oil / Fuel Oil, Other Petroleum, Polynuclear aromatic hydrocarbons (PAHs)
Site History: Site History: The South Bay Power Plant (facility), an electric power generation facility, was previously owned by San Diego Gas & Electric (SDG&E). The facility is a 158 acres property located between the San Diego Bay and the Interstate I-5 Freeway in San Diego. On December 13, 1993, DTSC authorized SDG&E to treat hazardous wastes at the facility under Tiered Permit Conditional Authorization. On December 27, 1996, SDG&E submitted to DTSC a Phase I Environmental Assessment Checklist for the facility, pursuant to the requirements of Health & Safety Code section 25200.14. The Phase I Checklist identified Solid Waste Management Units needing further investigation. DTSC conducted a Phase I verification inspection and confirmed that corrective action is required at the facility. In May 1998, SDG&E conducted a due diligence Phase I and Phase II investigations at the facility. The investigations identified five areas of concern needing further investigation due to elevated levels of metals, volatile organic compounds, and petroleum hydrocarbons. In December 1998, SDG&E sold the facility to the San Diego Unified Port Authority (Port). As part of the sale agreement, SDG&E agreed with the Port to remediate releases at the Facility that occurred prior to the sale in all areas accessible for investigation which were not going to be decommissioned. The Port leased the operation of the South Bay Power Plant to Duke Energy in April, 1999 and then Dynegy, Inc.. On November 20, 2007, DTSC signed a Corrective Action Consent Agreement with SDG&E to review documents generated from the investigations, and oversight of additional investigation and remediations required.

Potential Media Affected: Other Groundwater (uses other than drinking water), Sediments, Soil
Potential Contaminants of Concern: Heating Oil / Fuel Oil, Other Petroleum
Site History: The South Bay Power Plant (facility), an electric power generation facility, was previously owned by San Diego Gas & Electric (SDG&E). The facility is a 158 acres property located between the San Diego Bay and the Interstate I-5 Freeway in San Diego. On December 13, 1993, DTSC authorized SDG&E to treat hazardous wastes at the facility under Tiered Permit Conditional Authorization. On December 27, 1996, SDG&E submitted to DTSC a Phase I Environmental Assessment Checklist for the facility, pursuant to the requirements of Health & Safety Code section 25200.14. The Phase I Checklist identified Solid Waste Management Units needing further investigation. DTSC conducted a Phase I verification inspection and confirmed that corrective action is required at the facility. In May 1998, SDG&E conducted a due diligence Phase I and Phase II investigations at the facility. The investigations identified five areas of concern needing further investigation due to elevated levels of metals, volatile organic compounds, and petroleum hydrocarbons. In December 1998, SDG&E sold the facility to the San Diego Unified Port Authority (Port). As part of the sale agreement, SDG&E agreed with the Port to remediate releases at the Facility that occurred prior to the sale in all areas accessible for investigation which were not going to be decommissioned. Initially, SDG&E sought the remediation oversight from the San Diego County Environmental Health Certified Unified Program Agency (CUPA). However, oversight was referred to DTSC since the CUPAs have not been delegated corrective action oversight at Tiered Permit Conditional Authorization and Permit by Rule facilities. DTSC met with SDG&E, and provided them with the requirements and information on Corrective Action Consent Agreement for the DTSC oversight and cost reimbursement. SDG&E submitted to DTSC reports of previous investigations conducted at the site for review, and agreed to reimburse DTSCs costs in overseeing the remediation of five areas of concern identified during the previous investigation. However, DTSCs initial review of the documents submitted found that there are additional areas of concern at the facility. In addition, DTSC found that Duke Energy, the current operator of the facility, had also conducted separate investigations in the northern portion of the facility as part of the agreement with the Port. The Port leased the operation of the South Bay Power Plant to Duke Energy in April, 1999. In November 2000, DTSC met with SDG&E, Port and Duke Energy representatives regarding remediation responsibilities at the facility. All three parties indicated that there are areas at the facility that can not be investigated due to the plants current operation. DTSC agreed to review all documents submitted by SDG&E and Duke Energy. In January 2003, DTSC signed a Letter Agreement with SDG&E for the review of all documents submitted by both SDG&E and Duke Energy. Normally, a consent agreement would have been signed between either the operator or property owner. However, in the case of the South Bay Power Plant, there are the previous owner/operator, current property owner, and current operator which have engaged in sale and lease agreements addressing environmental responsibility for past and future releases at the facility. On February 11, 2003, DTSC provided the comments on the review of documents. Based on the review of the documents, DTSC identified 27 AOCs requiring further investigation. The investigation

of some of the AOCs were deferred until the site decommissioning. In the absence of a corrective Action Consent Agreement, SDG&E decided to do soil and groundwater investigations at those AOCs identified by DTSC without DTSC oversight. The DTSC is lead regulatory agency for any land-side investigation/assessment and cleanup activities (see associated Envirostor sites). The San Diego Regional Water Quality Control Board is lead regulatory agency for any investigation/as

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 10/25/2013	Source: EPA
Date Data Arrived at EDR: 11/11/2013	Telephone: N/A
Date Made Active in Reports: 01/28/2014	Last EDR Contact: 07/08/2014
Number of Days to Update: 78	Next Scheduled EDR Contact: 10/20/2014
	Data Release Frequency: Quarterly

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 10/25/2013	Source: EPA
Date Data Arrived at EDR: 11/11/2013	Telephone: N/A
Date Made Active in Reports: 01/28/2014	Last EDR Contact: 07/08/2014
Number of Days to Update: 78	Next Scheduled EDR Contact: 10/20/2014
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991	Source: EPA
Date Data Arrived at EDR: 02/02/1994	Telephone: 202-564-4267
Date Made Active in Reports: 03/30/1994	Last EDR Contact: 08/15/2011
Number of Days to Update: 56	Next Scheduled EDR Contact: 11/28/2011
	Data Release Frequency: No Update Planned

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 10/25/2013	Source: EPA
Date Data Arrived at EDR: 11/11/2013	Telephone: N/A
Date Made Active in Reports: 01/28/2014	Last EDR Contact: 07/08/2014
Number of Days to Update: 78	Next Scheduled EDR Contact: 10/20/2014
	Data Release Frequency: Quarterly

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 10/25/2013	Source: EPA
Date Data Arrived at EDR: 11/11/2013	Telephone: 703-412-9810
Date Made Active in Reports: 02/13/2014	Last EDR Contact: 05/29/2014
Number of Days to Update: 94	Next Scheduled EDR Contact: 09/08/2014
	Data Release Frequency: Quarterly

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 05/31/2013	Source: Environmental Protection Agency
Date Data Arrived at EDR: 07/08/2013	Telephone: 703-603-8704
Date Made Active in Reports: 12/06/2013	Last EDR Contact: 07/08/2014
Number of Days to Update: 151	Next Scheduled EDR Contact: 10/20/2014
	Data Release Frequency: Varies

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Date of Government Version: 10/25/2013	Source: EPA
Date Data Arrived at EDR: 11/11/2013	Telephone: 703-412-9810

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 03/11/2014

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 03/11/2014
Date Data Arrived at EDR: 03/13/2014

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 03/11/2014

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 03/11/2014
Date Data Arrived at EDR: 03/13/2014

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal institutional controls / engineering controls registries

US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 03/19/2014	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/21/2014	Telephone: 703-603-0695
Date Made Active in Reports: 07/15/2014	Last EDR Contact: 06/05/2014
Number of Days to Update: 116	Next Scheduled EDR Contact: 09/22/2014
	Data Release Frequency: Varies

US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 03/19/2014	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/21/2014	Telephone: 703-603-0695

Number of Days to Update: 18	Next Scheduled EDR Contact: 09/01/2014
	Data Release Frequency: Varies

Federal ERNS list

ERNS: Emergency Response Notification System

Emergency Response Notification System. ERNS records and stores information on reported releases of oil and hazardous substances.

Date of Government Version: 09/30/2013	Source: National Response Center, United States Coast Guard
Date Data Arrived at EDR: 10/01/2013	Telephone: 202-267-2180
Date Made Active in Reports: 12/06/2013	Last EDR Contact: 07/03/2014
Number of Days to Update: 66	Next Scheduled EDR Contact: 07/14/2014
	Data Release Frequency: Annually

State- and tribal - equivalent NPL

RESPONSE: State Response Sites

Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Local Lists of Hazardous waste / Contaminated Sites

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 05/28/2014	Source: Drug Enforcement Administration
Date Data Arrived at EDR: 06/20/2014	Telephone: 202-307-1000

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

Date of Government Version: 11/01/2013	Source: Environmental Protection Agency

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR US Hist Cleaners: EDR Exclusive Historic Dry Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 07/30/2013

UTM X (Meters):	491404.5
UTM Y (Meters):	3606736.0
Elevation:	20 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	32117-E1 IMPERIAL BEACH, CA MX02
Most Recent Revision:	1976

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General WSW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Target Property County</u> SAN DIEGO, CA	FEMA Flood <u>Electronic Data</u> YES - refer to the Overview Map and Detail Map
--	--

Flood Plain Panel at Target Property: 06073C - FEMA DFIRM Flood data

Additional Panels in search area: Not Reported

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u> IMPERIAL BEACH	NWI Electronic <u>Data Coverage</u> YES - refer to the Overview Map and Detail Map
--	--

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data:*

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
18	1/2 - 1 Mile ENE	S
20	1/2 - 1 Mile East	Not Reported
21	1/2 - 1 Mile NNW	WNW

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Tertiary
Series:	Pliocene
Code:	Tp (<i>decoded above as Era, System & Series</i>)

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: HUERHUERO

Soil Surface Texture: loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Moderately well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	11 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 14 Min: 4	Max: 6 Min: 5.1
2	11 inches	55 inches	clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit 50% or more), Fat Clay.	Max: 0.42 Min: 0.01	Max: 8.4 Min: 7.4
3	55 inches	72 inches	stratified sand to sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand. COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 4 Min: 1.4	Max: 8.4 Min: 7.4

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Map ID: 2

Soil Component Name: Water

Soil Surface Texture: loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class:
Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

Soil Map ID: 3

Soil Component Name: HUERHUERO

Soil Surface Texture: loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Moderately well drained

Hydric Status: Partially hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	11 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 14 Min: 4	Max: 6 Min: 5.1

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database

Source: Department of Water Resources

Telephone: 916-651-9648

California Drinking Water Quality Database

Source: Department of Public Health

Telephone: 916-324-2319

The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

OTHER STATE DATABASE INFORMATION

California Oil and Gas Well Locations

Source: Department of Conservation

Telephone: 916-323-1779

Oil and Gas well locations in the state.

RADON

State Database: CA Radon

Source: Department of Health Services

Telephone: 916-324-2208

Radon Database for California

Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.
