Building Today. Boarding Tomorrow.

E-News Update | April 2017

Oceanside Transit Center Platform Improvement Project

Project Update

Night work is planned for Monday, April 10 to Saturday, April 15, and Monday, April 17 to Friday, April 21, throughout the project area. Crews will be working on constructing the new third track, and testing the new track, walkway, signals, and rail switches. Nearby residents can expect nighttime noise and lights. Crews will do their best to minimize impacts to nearby residents and businesses. Thank you for your ongoing patience as we work to improve Oceanside Transit Center.

Crews work on the new third track south of the Oceanside Transit Center.

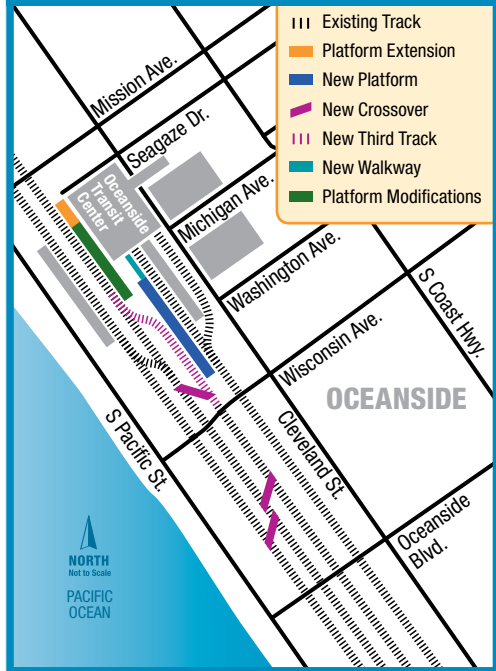

About the Project

The Oceanside Transit Center Platform Improvement Project will improve the efficiency and on-time performance of the station's transit operations by adding a third track, which allows for an additional train to move through the station when two trains are boarding passengers. Other project improvements include constructing a new boarding platform to the south, extending an existing platform to the north, adding new crossovers and turnouts to enhance rail operations, and modernizing the station's amenities with new shelters, directional lighting, seating, and electronic signs displaying real-time arrivals and departures. Construction is expected to be complete in mid-2017. This project is a key part of the larger effort to improve and modernize rail infrastructure along Los Angeles-San Diego-San Luis Obispo (LOSSAN) coastal rail system.

TRAIN HORN RULES

Federal regulations require train conductors to sound the horn when approaching an active construction site, even in a quiet zone. Train horns serve as a warning system to ensure the safety of railroad workers. More information and rules governing the use of train horns can be found on the Federal Railroad Administration's website at www.fra.dot.gov.
