

## San Elijo Lagoon Highway Bridge Replacement

Caltrans and SANDAG Build NCC highway improvements include replacing the highway bridge over the San Elijo Lagoon Ecological Reserve. The new bridge is wider to better accommodate two new Carpool/HOV Lanes (one in each direction) and multimodal travel options. The bridge is also longer, providing increased lagoon tidal flow and improves the overall health of the lagoon. The new bridge construction allows room for future highway improvements, ensuring the lagoon does not need to be disrupted again.
