

Coastal Native Landscape

Throughout the Build NCC project, Caltrans and SANDAG crews use California native plants to connect the project elements with the coastal experience through landscape design. The planting design blends seamlessly with native slopes and is able to thrive despite the challenge of erodible soils, water restrictions, and low maintenance requirements. Signature native plants found in the local natural setting include Torrey Pines, Sycamores, Coastal Buckwheat, Coast Live Oak, Lemonade Berry, Toyon, and Coastal Sage Scrub.
