

## San Elijo Lagoon Rail Bridge Replacement and Double-Tracking

SANDAG and Caltrans Build NCC rail improvements include double-tracking 1.5 miles of the LOSSAN rail line in Encinitas. The existing single-track wooden trestle bridge was replaced with a modern, double-track concrete bridge, extending from Cardiff-by-the-Sea to the southern border of the San Elijo Lagoon. The project has improved overall lagoon health and provided infrastructure to accommodate future passenger and freight rail service demand.
