

San Elijo Lagoon Bike and Pedestrian Suspension Bridge

Caltrans and SANDAG Build NCC active transportation improvements include the addition of a suspended bike and pedestrian bridge located under the new I-5 highway bridge at Manchester Avenue. The bridge aims to increase north-south connectivity for people traveling through seven miles of trails at the San Elijo Lagoon Ecological Reserve. It connects to the extension of the Solana Hills Trail which creates two east-west trail connections for people accessing the Santa Inez trail and the North Coast Bike Trail along I-5.
