

## Mitigated Negative Declaration Robinson Avenue Bikeway

---

### MITIGATION MONITORING AND REPORTING PROGRAM

The California Environmental Quality Act (CEQA; California Public Resources Code §21081.6) requires public agencies to adopt a monitoring and reporting program for the revisions which it has required in the project and the measures it has imposed to mitigate or avoid significant environmental effects. In order to ensure implementation of the mitigation measures and design features identified in the Mitigated Negative Declaration (MND), SANDAG shall adopt a Mitigation Monitoring and Reporting Program (MMRP). This MMRP has been prepared in accordance with the proposed Robinson Avenue Bikeway Project, the environmental effects of which have been evaluated in an MND prepared in compliance with CEQA and the CEQA Guidelines.

This MMRP identifies the mitigation measures and design features that shall be implemented by SANDAG as the responsible party and the timing of implementation. SANDAG may delegate the reporting or monitoring responsibilities identified below to another entity that accepts the delegation (such as a construction contractor). However, until the mitigation measures and design features included in the MMRP have been completed, SANDAG remains responsible for ensuring that implementation occurs in accordance with the adopted program (CEQA Guidelines §15097[a]).

Mitigation Measure	Time Frame of Mitigation				Responsible Party	Completed	Initials	Notes (Optional)
	Planning	Pre-Construction	During Construction	Post-Construction				
<i>Biological Resources</i>								
<b>MM-BIO-1</b>	Impacts from construction-related noise and vegetation removal may occur to wildlife if construction occurs during the breeding season (i.e., February 1 - September 15 for a combined breeding season for both raptors and songbirds). Protection of general avian wildlife in compliance with the Migratory Bird Treaty Act and California Code will be accomplished by either scheduling		X	X		SANDAG	<input type="checkbox"/>

Mitigation Measure	Time Frame of Mitigation				Responsible Party	Completed	Initials	Notes (Optional)
	Planning	Pre-Construction	During Construction	Post-Construction				
<p>vegetation removal between September 16 and January 31 or, if vegetation removal must commence during the nesting season (February 1 - September 15), a one-time biological survey for nesting bird species must be conducted in all suitable habitat for the presence of nesting birds by a qualified biologist 72 hours prior to the commencement of work.</p> <p>If any active nests are detected, the area will be flagged and mapped on construction plans along with a 300-foot buffer, or as recommended by the qualified biologist. These buffer areas established by the qualified biologist will be avoided until the nesting cycle is complete or it is determined that the nest has failed.</p>								
<i>Cultural Resources</i>								
<p><b>MM-CUL-1</b> The archaeological monitor shall be present during any ground disturbing activities at the proposed bikeway path location for excavations that are deeper than 2 feet. A qualified archaeological monitor shall be retained in order to monitor and recognize potential archaeological discoveries during construction of the proposed bikeway path. If unexpected, potentially significant archaeological resources are encountered, the archaeological monitor shall have the authority to temporarily redirect or suspend construction activities within 50 feet of the discovery and evaluate the potential significance of the find and record or salvage it. Prior to the start of ground disturbing activities at the proposed bikeway path location, SANDAG shall verify that the requirement for archaeological monitoring is noted on the appropriate construction documents.</p>		X	X		SANDAG	<input type="checkbox"/>
